

INVENTORY CONTROL AND AUTOMATIC ORDERING

Supplies are tagged with Bar Codes and/or RFID tags

Storage Room

or

Refrigerated Storage

with RFID Reader

Each time a RFID tagged box or package is placed in or removed from storage, there is an inventory data base transaction (addition or subtraction).

Reports

A complete on-hand inventory report can be generated with a push of a button.

When the on-hand inventory of a specific item goes below an established threshold, a request to order is generated or an order form can be filled out automatically.

Higher level inventory monitoring.

A RFID tag activated video monitoring system enables a user to capture on video, the person removing supplies from storage.
